- 200mm Diameter LED Amber Flashing Beacons
- Solar Powered
- Virtually Maintenance Free
- Remote Operation via Mobile Phone
- Battery Discharge Protection via Timer
- Visual Confirmation of Beacons
- Strong, vandal-resistant construction
- Full Installation Service Available

Details

Designed to provide advance warning to motorists, PWS offer Solar Powered Cattle Crossing Warning Signs with remotely operated Flashing Amber Beacons.

The signs are 900mm x 1200mm in size and have a reflective W151 Cattle Crossing Warning diamond and twin Amber LED Flashing S102 Beacons x 200mm diameter.

The beacons are switched on & off using your own mobile phone - via a simple phone call (or App if preferred). The reverse side of each sign has a small flashing beacon to provide a visual confirmation to the operator that the beacons on the front-facing side of the signs are flashing, and providing advance warning to motorists. If the operator forgets to switch off the beacons when cattle movement is completed, an inbuilt timer will automatically switch off the beacons and reset the system, to prevent the batteries discharging fully and being damaged.
